

## Image Resizing Guide

For initial submission into the awards, you will need to resize your images to 1920 pixels along the longest edge and saved as a jpeg in sRGB colour space. Here is a guide on how to do it in the popular image editing apps. If your image editing software is not covered by the guide below, the process will be similar so please prepare your images to match the requirements as closely as you can.

### Lightroom Classic

1. Select the image you wish to enter.
2. Choose **File > Export...** to open the Export dialogue.
3. **Export Location** – choose the folder you want to export to.
4. **File Naming** – tick *Rename To*, select *Custom Name* from the dropdown, and type your filename in the *Custom Text* field using the format outlined in our Preparing Your Images section.
5. **File Settings** – set *Image Format* to JPEG, *Quality* maximum (100), *Colour Space* to sRGB.
6. **Image Sizing** – tick *Resize to Fit*, choose *Long Edge*, and set the value to 1920 pixels.
7. **Metadata** – set *Include* to *All Metadata* to keep your EXIF data intact.
8. Click **Export**.

### Lightroom (cloud and mobile)

The cloud version of Lightroom, including the iOS and Android apps, uses a different export dialogue from Lightroom Classic.

1. Open the image you wish to enter.
2. Tap or click the **Share icon** (top right on mobile, top right of the image on desktop).

3. Choose **Export As**.
4. **File Type** – select JPEG.
5. **Dimensions** – choose *Custom* and set the long side to 1920 pixels.
6. **Quality** – set to *Maximum* (the slider's highest setting, or Best on iOS).
7. **More Options** – set *Colour Space* to sRGB and *Include Metadata* to All.
8. Tap or click **Export**, then choose where to save the file.
9. Rename the file using the format outlined in our Preparing Your Images section. On mobile, you may need to rename in the Files app rather than inside Lightroom.

## Photoshop

1. Open your image in Photoshop.
2. Choose **File > Export > Export As...**
3. **Format** – select JPEG.
4. **Quality** – set to maximum (100 in Export As, or 12 in Save As).
5. **Image Size** – set the longest edge to 1920 pixels. Keep the link icon between width and height enabled so proportions are retained. If your original image is already smaller, leave it at the original size.
6. **Colour Space** – tick *Convert to sRGB* and *Embed Colour Profile*.
7. **Metadata** – set to *All*. This preserves EXIF data.
8. Click **Export** and choose the destination folder.
9. In the Save As field, type your filename using the format outlined in our Preparing Your Images section.
10. If you prefer the older Save As workflow: resize via **Image > Image Size**, convert via **Edit > Convert to Profile > sRGB IEC61966-2.1**, then **File > Save a Copy** as JPEG at quality 12 with *Embed Colour Profile* ticked.

## Capture One

1. Select the image you wish to enter.
2. Choose **File > Export > Variants...** to open the Export Variants dialogue.
3. **Location** – use the *Destination* dropdown to choose the folder you want to export to.
4. **Naming** – delete any default tokens in the *Format* field and type your filename using the format outlined in our Preparing Your Images section.

5. **Recipe** – in the Basic tab, set *Format* to JPEG, *ICC Profile* to sRGB, *Scale* to *Long Edge* at 1920px, *Quality* to maximum (100).
6. **Metadata** – in the Metadata tab, ensure all relevant boxes are ticked to preserve EXIF data.
7. Click **Export Variant**.

## Affinity Photo 2

1. Open the image you wish to enter.
2. Choose **File > Export...**
3. Select JPEG from the file formats.
4. **Size** – set the longest edge to 1920px. If your original image is already smaller, keep the original size.
5. **Quality** – set to maximum (100).
6. Click **More**, set the *ICC Profile* dropdown to sRGB, tick *Embed ICC profile*, tick *Include metadata*, then click Close.
7. Click **Export**.
8. In the Save As field, type your filename using the format outlined in our Preparing Your Images section.
